PROFESSIONAL SUMMARY

Software Development Engineer specializing in high-performance full-stack applications and decoupled microservices architecture. Experienced in engineering custom media pipelines, architecting robust headless CMS platforms, and optimizing database performance. Combines robust systems engineering with a designer's eye to deliver pixel-perfect, highly optimized frontend experiences.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS,

Technology: Next.js, React.js, Express.js, Fastify, Tailwind CSS, Prisma, Drizzle ORM, Redux Toolkit

Infrastructure/DB: Docker, Docker Compose, PostgreSQL, ScyllaDB, Redis, Nginx, GitHub Actions, Bun

Services: Payload CMS, Bunny.net, Cloudflare (Workers, Pages, R2), Imgproxy, Gemini API, OpenAI API

EXPERIENCE

Software Developer Engineer | Property.new

Mar 2026 - Present

- **Frontend Performance:** Reduced Next.js network payload by 90% (18.5MB to 1.8MB) and main-thread execution by 79% by migrating to React Server Components and lazy-loading 40+ UI modals.
- **CMS & Spatial Mapping:** Transitioned legacy Sequelize APIs to Payload CMS, architecting custom property collections, a dedicated admin dashboard, and integrating the Google Maps API for drawing spatial boundaries and polygons.
- **Full-Stack Integration:** Bridged the decoupled Next.js frontend with Payload's REST APIs to seamlessly fetch and connect complex property data across the UI.
- **Media Pipeline:** Built a custom media upload pipeline to Cloudflare R2, securely serving multi-format assets through Imgproxy and Bunny.net using signed URLs.
- **API Optimization:** Lowered Total Blocking Time (TBT) by aggregating API calls and pre-calculating property statistics directly in the database during CRUD operations.

Full Stack Developer (Intern) | EVO-A Pvt. limited

June 2025 - Nov 2025

- Developed a real-time AI chat system using React and Next.js, integrating the Gemini API to deliver context-aware, multi-role interactions with streaming responses.
- Improved response quality by 80% through dynamic prompt engineering and optimized state management to reduce frontend latency.

UI/UX Designer (Intern) | EVO-A Pvt. limited

April 2025 - June 2025

- Built a reusable Figma design system and high-fidelity prototypes, establishing the application's visual foundation before transitioning into the lead developer role for the MVP.

PROJECTS

High-Performance URL Shortener | Fastify, ScyllaDB, Redis, Nginx, Docker Compose

- Built a read-optimized URL shortener using a decoupled dual-service architecture (Generation and Resolver) backed by ScyllaDB and Redis to handle concurrent traffic.
- Implemented a Snowflake ID generator for ultra-fast 7-digit UUID mapping and set up a CI/CD pipeline using GitHub Actions to deploy images via Docker Compose.

Identity Service (Microservice) | Fastify, Bun, Prisma, PostgreSQL, Docker

- Developed an open-source, plug-and-play Email OTP microservice designed for easy integration with API Gateways.
- Containerized with Docker and secured against brute-force attacks using strict IP rate limiting and Helmet headers.

EDUCATION

Mahatma Jyotiba Phule Rohilkhand University

2022 - 2026

B.Tech, Computer Science & Information Technology (CSIT)

Kendriya Vidyalaya N.E.R

2021 - 2022

Senior Secondary (Class XII), CBSE – Science Stream
